In this directory the source files are processed with m4, dpic -g, and TikZ PGF. This is a collection of diagrams the author has had occasion to produce using m4 circuit macros and others, and gpic or dpic. The source-file names are shown for reference. There may be other or better m4 or pic constructs for producing the same drawings in some cases.

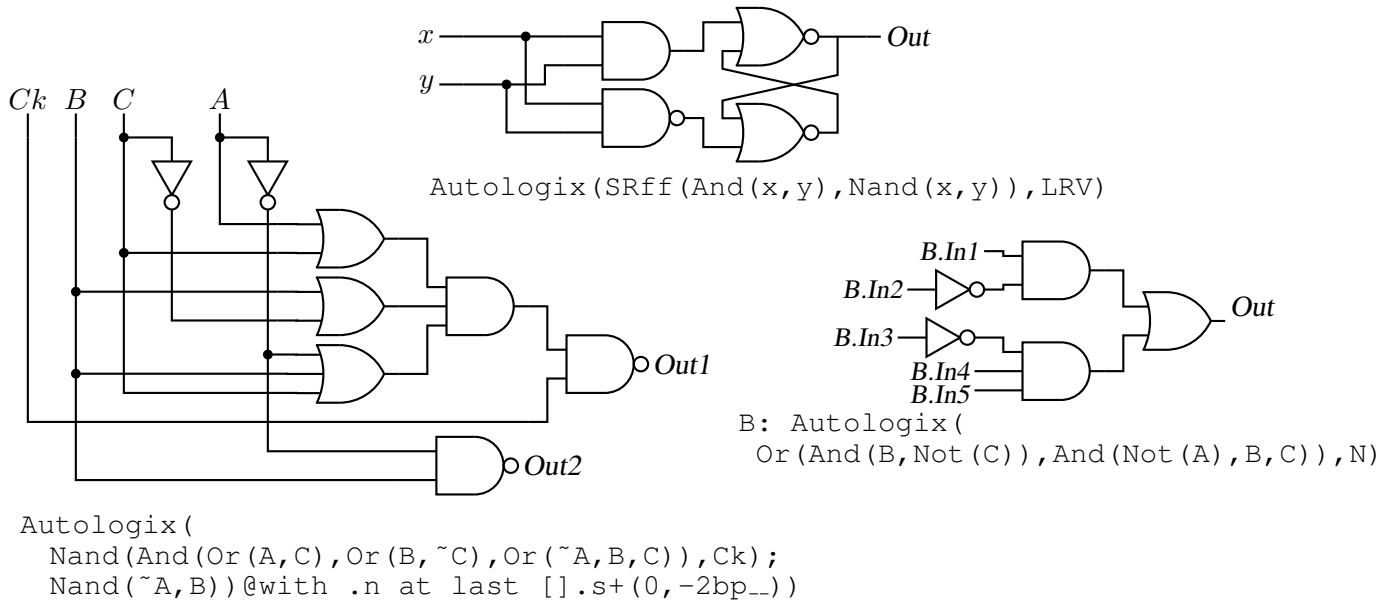

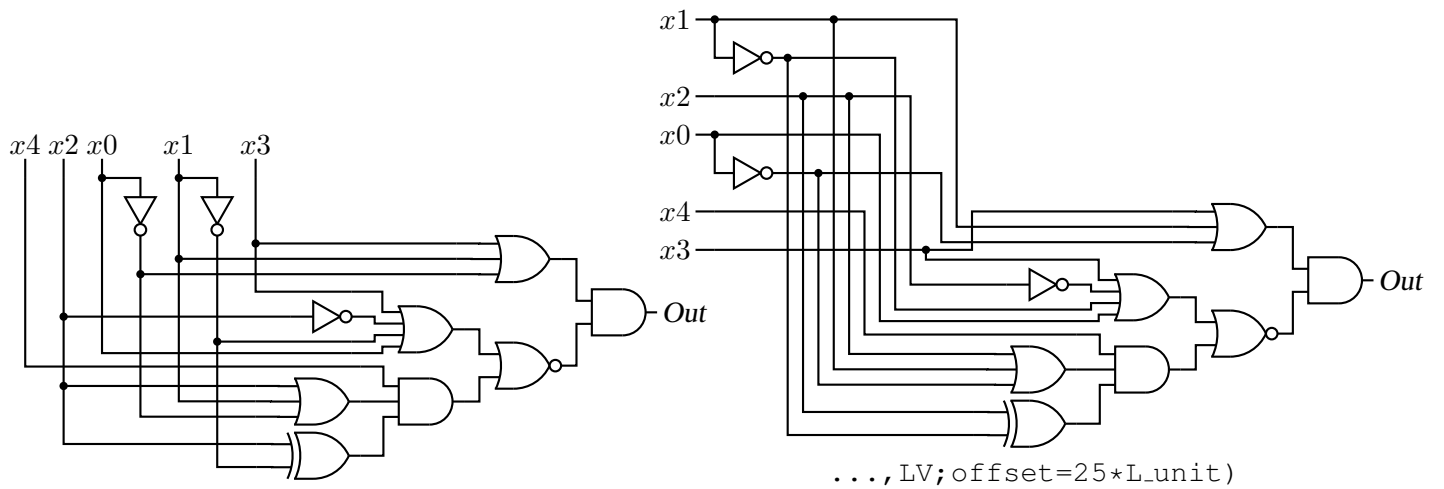

Figure 67: The `Autologix (Boolean expression; Boolean expression... , options)` macro automatically draws Boolean expressions in function notation. The function tree is drawn, then a row or column of inputs, then the connections. The default result is on the left, a custom element at the top, and a tree of gates only is shown on the right. [Alogix.m4].

Autologix (And(Or(x3, x1, ~x0),
Nor(Or(x3, Not(x2), ~x1, x0), And(x4, Or(x2, x1, ~x0), Xor(x2, ~x1))))))

Figure 68: The Autologix macro can draw inputs on the left but the added drawing complexity may require hand tuning with second-argument options: L puts the inputs on the left, R reverses their order, V scans the input arguments in reverse order, and `offset=value` displaces the array of inputs [ABlogix.m4].

Figure 76: Illustrating the macro `dimension_` (*linespec*, *offset*, *label*, *D|H|W|blank width*, *tic offset*, $\langle - | - \rangle$). A negative second argument implies an offset to the right of the *linespec* direction. A *label* starting with `"` or `sprintf` is copied literally. If *label* is an `s_box(...)` then setting argument 4 to *H*, *W*, or *D* tailors the blank width to the `s_box` height, width, or diagonal respectively; i.e., *W* is equivalent to `s_wd+textoffset*2`. The macro `arcdimension_` is similar but the first argument specifies the arc to be dimensioned and the second argument is the outward radial offset of the dimension arrow arc. [ex09.m4].
