## The wave equation

1. Suppose the wave speed is $c=2.0 \mathrm{~m} / \mathrm{s}$ and a string is initially at rest. Suppose the string is 5 m long.
$a$. What is an appropriate value of $\Delta t$ ?
Answer: $\Delta t=0.25$
$b$. Suppose both boundaries are initially at rest, but then at $t=0.25 \mathrm{~s}$, the one boundary is brought up to one, and immediately brought back to 0 before $t=0.5$. Fill in the initial and boundary conditions for up to 2 seconds.

Answer:

| 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 |  |  |  |  |  |  |  |  |
| 0 |  |  |  |  |  |  |  |  |
| 0 |  |  |  |  |  |  |  |  |
| 0 |  |  |  |  |  |  |  |  |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

$c$. Find the propagation for up to one second.
Answer:

| 0 | 1 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | 0.25 | 0.375 | 0.3281 |
| 0 | 0 | 0 | 0.0625 | 0.1875 |
| 0 | 0 | 0 | 0 | 0.015625 |
| 0 | 0 | 0 | 0 | 0 |
| 0 | 0 | 0 | 0 | 0 |

$d$. The following shows the propagation for three seconds:

| 0 | $\mathbf{1}$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 0 | 0 | $\mathbf{0 . 2 5}$ | $\mathbf{0 . 3 7 5}$ | $\mathbf{0 . 3 2 8 1}$ | 0.1641 | -0.0059 | -0.0908 | -0.0734 | -0.0049 | 0.0457 | 0.0436 | 0.0047 |
| 0 | 0 | 0 | 0.0625 | 0.1875 | $\mathbf{0 . 3 0 4 7}$ | $\mathbf{0 . 3 2 8 1}$ | 0.2278 | 0.0579 | -0.0818 | -0.1192 | -0.0599 | 0.0253 |
| 0 | 0 | 0 | 0 | 0.0156 | 0.0703 | 0.167 | $\mathbf{0 . 2 6 8 1}$ | $\mathbf{0 . 3 1 0 3}$ | $\mathbf{0 . 2 5 0 1}$ | 0.103 | -0.0603 | -0.1627 |
| 0 | 0 | 0 | 0 | 0 | 0.0039 | 0.0234 | 0.073 | 0.1531 | 0.2342 | $\mathbf{0 . 2 6 0 7}$ | $\mathbf{0 . 1 8 2 7}$ | -0.0018 |
| 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |

Does this make sense?
Answer: While this is a course approximation, highlighted in the table above is the peak, and as you may note, the peak appears to be travelling at approximately 2 meters per second (one cell per two time steps).
2. What is $c$ for the electromagnetic force, assuming a vacuum?

Answer: 299792458 m/s
